DEAD LOAD GROUND SUPPORT

● Floor stabilizers, extensions and levelling jacks

UPSTAGE VIDEO WALL BRACING SYSTEM AND BALLAST REQUIREMENT

SL225

When upstage video wall bracing system is used :

- 8 bracing cables must be installed
- 6 x 2200 lb (1000 kg) ballast blocks must be installed and tied to the floor structure near the corner post leg, as shown here

Upstage screen bracing system is designed to support screens up to 305 ft² (28 m²).

If a screen larger than 305 ft² (28 m²) is installed, a procedure to reduce the exposed screen surface must be included in the High Wind Action Plan.

Screen height H (m)	Screen width (16:9) L (m)	Anchor point distance to upper (and lower) screen edge A (m)
2.5	4	0.833
2.5	4.5	0.833
3	5	0.845
3	5.5	0.647
3.5	6	0.473
3.5	6.5	0.354
4	7	0.335

RIGGING PLAN

1/5

SL225

A THOROUGH UNDERSTANDING OF THE INTER-RELATED LOADINGS SHOWN IN THIS RIGGING PLAN IS NEEDED IN ORDER TO SAFELY USE THIS MOBILE STAGE ROOF AND TAKE FULL ADVANTAGE OF THE MANY RIGGING OPPORTUNITIES IT OFFERS.

This mobile stage roof offers a variety of rigging options with regard to load capacity, placement and type.

There are rigging pipes, trusses, roof rigging points and side overhang rigging beams.

This rigging plan locates and defines these rigging features, includes load capacity for each and describes maximum combinations of loads amongst features.

Take note of exclusions, maximum sub-totals in a group, load balance requirements, maximum lifting capacity of roof and maximum rigging load on roof.

The maximum load on the roof is less than the sum of the maximum load on each rigging feature.

Refer to Operator's Manual for procedures in regards to proper setup and setup methods of the stage and its options.

The information contained in the current document is final and must be considered as such. They are derived from design briefs and summarized to help the user plan rigging configurations safely. It is therefore mandatory that the user follows and respects the capabilities and limitations described herein. Overloading of stage components above their specified capacity may result in structural failure, equipment damage, injury or death. Stageline cannot be held responsible if the user, himself or subcontractors under his supervision, derogate from this document and/or the approved rigging plan. If a desired configuration cannot meet these requirements, the user must contact Stageline to analyse the case and obtain further instructions. Special restrictions and limitations may apply.

Certain authorities may require that a rig configuration plan, signed and sealed by a recognized member of a professional body, be available to allow the stage to be setup on their territory. This document was not intended to and cannot be used or considered as an official document or certificate to serve this purpose. Contact responsible authorities or Stageline for details.

Drawings may show stage equipped with optional accessories. May be sold separately.

RIGGING PLAN

2/5

SL225 RIGGING RESTRICTIONS:

- Maximum total load capacity : 18000 lbs
- Maximum load capacity Zone A : 4300 lbs
- Maximum load capacity Zone B : 2000 lbs
 - Line Array loads must be considered on P20 & P31.
 - Side Overhang Brace loads must be considered on P25.
- Maximum load capacity Zone C or Zone G : 1050 lbs
 - Zone C or Zone G load is equal to the sum of the point loads on B1, B2, B3 & B4 included in the zone.
 - T2 can't be loaded when using Zone C or Zone G.
 - T1 load capacity is reduced when using Zone C or Zone G, see Table 01.
 - P39 & P40 can't be loaded when using Zone C.
- Maximum load capacity Zone D or Zone F : 1775 lbs
 - Zone D or Zone F load is equal to the sum of the point loads on B1, B2, B3 & B5 included in the zone.
 - T1 can't be loaded when using Zone D or Zone F.
 - T2 load capacity is reduced when using Zone D or Zone F, see Table 02.
- Maximum load capacity Zone E : 1450 lbs
 - Zone E load is equal to the sum of the loads on B6, B7 & B8.
 - T1s can't be loaded when using Zone E.
- B4 & B5 can't be loaded simultaneously with either B2 or B3.
- The sum of the loads on Zone C & Zone D can't exceed 1050 lbs.
- The sum of the loads on Zone C & Zone E can't exceed 1775 lbs.
- The sum of the loads on Zone D & Zone E can't exceed 1325 lbs.
- The sum of the loads on Zone G & Zone F can't exceed 1050 lbs.
- The sum of the loads on Zone G & Zone E can't exceed 1775 lbs.
- The sum of the loads on Zone F & Zone E can't exceed 1325 lbs.
- Always load the roof symmetrically about center. For atypical loads, contact Stageline for information.
- P39 and P40 points must be evenly distributed or centered at a single point not exceeding 350 lb.
- Do not load more than 30 lb/ft per moveable hanging bar or 180 lb at a single centered point.
- The load capacity of central moveable beams corresponds to that of beams B6, B7, or B8, depending on their location:
 1. As B6 if positioned between the roof edge and beam B6.
 2. As B7 if positioned between B6 and B7.
 3. Otherwise, as B8.

LIFTING RESTRICTIONS

- MAXIMUM ROOF LIFTING CAPACITY: 8000 lb (3630 kg).
- Maximum asymmetric load difference between downstage and upstage roof must not exceed 2000 lb (907 kg) including loads on T1 trusses.
- When lifting, make sure loads are evenly divided between right and left side of roof.
- Raise screen only when roof is lifted with corner posts and telescopic columns pinned and secured.
- Maximum load on each downstage and upstage roof panels 2000 lb (907 kg)
